Once in a while, we run into a website environment that doesn't support JavaScript. Wix and GoDaddy are the most commonly-used web builders that don't allow JavaScript to be added onto the site, but there are other configurations that can prevent this.

If your website has such a restriction, there are some options in the Flipcause Integration Center that won't be able to be added to your website. Anything labeled as a "Floating button" or a "pop-up" won't be able to function without JavaScript. In most cases, this is not an issue. Everything else should work perfectly fine, and since most website accept iFrames to be added, you can still have campaigns integrated in a way that look and feel native to your website.

To make the distinction easier, refer to the below image for the options that are available to use. The "Direct Embed Integrated Campaign" is our most recommended option, so this is highlighted in a brighter green. Anything with an orange X requires JavaScript functionality.
If you have any questions, or want to discuss other website options to improve functionality, don't hesitate to reach out to your Success Manager!
