

Campaign forwarding allows you to direct visitors to a different webpage when they go to your campaign URL. This is only useful for campaigns that are archived or outdated, so they do not land on a blank 404 page.

To set up campaign forwarding:

1. Go to **Campaigns > Edit this Campaign** (choose a campaign) > **Campaign Settings > Campaign Forwarding**.
2. Click the toggle to **Yes**.
3. Enter the full URL, starting with "https://".
4. Supporters who visit this campaign will now be redirected to the set URLs.
